

**AMENDMENTS TO THE CLAIMS**

**This listing of claims will replace all prior versions and listings of claims in the application:**

**LISTING OF CLAIMS:**

Claim 1. (currently amended): A curable composition comprising:

an organic polymer (A1) having one or more silicon-containing functional groups capable of cross-linking by forming siloxane bonds in which the one or more silicon-containing functional groups capable of cross-linking by forming siloxane bonds each are a trimethoxysilyl group or a triethoxysilyl group, wherein the silicon-containing functional groups are located at the terminals of the molecular chain of the organic polymer (A1); and

a component which is a silicate (B) and further comprising a tin neodecanoate ~~carboxylate (C) in which the  $\alpha$ -carbon of the carboxyl group is a quaternary carbon atom~~ wherein a main chain skeleton of the organic polymer (A1) is a polyoxyalkylene polymer.

Claim 2. (previously presented): The curable composition according to claim 1, wherein the silicate (B) is a condensate of a tetraalkoxysilane.

Claims 3. to 11. (canceled).

Claim 12. (currently amended): The curable composition according to claim 1 ~~or 11~~, wherein the organic polymer having one or more silicon-containing functional groups capable of cross-linking by forming siloxane bonds is an organic polymer obtained by an addition reaction

between an organic polymer having one or more unsaturated groups introduced into the terminals thereof and a hydrosilane compound represented by the general formula (1):

where X represents a hydroxy group or a hydrolyzable group, and three X's may be the same or different.

Claims 13. to 22. (canceled).

Claim 23. (currently amended): The curable composition according to claim 1 ~~any one of claims 1, 11, 15, 16, 18, 20 and 21~~, wherein the organic polymer having one or more silicon-containing functional groups capable of cross-linking by forming siloxane bonds is an organic polymer which substantially does not contain an amide segment (-NH-CO-) in the main chain skeleton thereof.

Claim 24. (currently amended): The curable composition according to claim 1 ~~any one of claims 1, 11, 15, 16, 18, 20 and 21~~, wherein the one or more silicon-containing functional groups capable of cross-linking by forming siloxane bonds each are a triethoxysilyl group.

Claim 25. (currently amended): The curable composition according to claim 1 ~~any one of claims 1, 11, 17, 18, 20 and 21~~, further comprising an aminosilane coupling agent.

Claim 26. currently amended): A one-part curable composition according to claim 1 ~~any one of claims 1, 11, 15, 16, 18, 20 and 21~~, further comprising a dehydrating agent.

Claims 27-82. (canceled).
